Port and Marine Experience

Port Expansion Townsville

GKL Group was engaged to support the Port of Townsville's Project Management Office in the delivery of a 14-hectare dedicated laydown area and associated transport network upgrades, designed to accommodate wind turbine components and large project cargo imports. GKL Group's role spanned design and procurement through to construction management and final asset handover, supporting the Port in delivering critical infrastructure that positions North Queensland as a hub for global trade and emerging industries including renewable energy and advanced manufacturing.

Design Management Townsville

GKL Group was engaged by Port of Townsville Limited to lead the development and design of capital works across the Port, managing complex, multi-stakeholder design processes from concept through to construction-ready documentation. Projects include the Swept Path project, Benwell Road Car Park expansion, and the Centenary Loop Empty Container Laydown project, GKL Group applied its construction experience during the design process from the outset, achieving significant cost reductions while meeting the required outcomes within budget.

Sea Wall Project Townsville

Representing Port of Townsville Limited, GKL Group provided inspection services for the construction of a 2.2km rock wall as part of the $193 million Channel Upgrade Project. Our role was to inspect the placement of rock and geofabric throughout construction, ensuring delivery was aligned with the project scope.

The completed project provides an iconic view that can be seen from the mainland and when arriving or departing the Port of Townsville.
